CUSTOMIZED SIGNAL PLATES FOR A UNIQUE IDENTITY

We have created our orientation system, elegant, efficient, and orderly. Toledo by Futility is a line of fully **customizable** signage and directional wall plates made with artisanal authenticity.

The personalization of the plates is sensitive to the specific requests of the customer. The image of the signage can identify the internal spaces of an accommodation facility, at the same time make a unique environment. It is made by combining the use of different processes with materials such as Dibond, wood, and forex and with refined plexiglas applications.

The plates are flexible to any type of display requirement, indications and signage in hotels, public offices, professional studios, offices, companies, shopping centers, points of sale, professional studios, agencies, exhibition centers, convention centers, health facilities, etc.

The solutions were based on the main function of signage, which is to help people orient themselves quickly and easily in environments. And there is no doubt that the entire system and the design language must be simple and integrate with the coordinated image: clear, direct, intuitive and easy to understand. The plates are invented for **easy installation**.

What are you waiting for?

Put us to the test. Choose your particular 'sense of direction'!
